

72

70. An isolated trichodiene synthase obtained from a *Fusarium venenatum* strain, selected from the group consisting of:

- (a) a trichodiene synthase having an amino acid sequence which has at least 97% identity with SEQ ID NO. 2;
- (b) a variant of the trichodiene synthase having an amino acid sequence of SEQ ID NO. 2 comprising a substitution, deletion, and/or insertion of one or more amino acids;
- (c) an allelic variant of (a) or (b); and
- (d) a fragment of (a) or (c) that has trichodiene synthase activity.

73

71. The trichodiene synthase of claim 70, having an amino acid sequence which has at least 97% identity with SEQ ID NO. 2.

74

72. The trichodiene synthase of claim 70, comprising the amino acid sequence of SEQ ID NO. 2 or a fragment thereof having trichodiene synthase activity.

75

73. The trichodiene synthase of claim 72, comprising the amino acid sequence of SEQ ID NO. 2.

76

74. The trichodiene synthase of claim 70, which is a variant of the trichodiene synthase having an amino acid sequence of SEQ ID NO:2 comprising a substitution, deletion, and/or insertion of one or more amino acids.

77

75. The trichodiene synthase of claim 70, which is obtained from *Fusarium venenatum* ATCC 20334.

78

76. The trichodiene synthase of claim 70, which is encoded by the nucleic acid sequence contained in plasmid pTri5 contained in *E. coli* NRRL B-30029.

REMARKS

The present application is a continuation of U.S. application Serial No.
